

## 100% Recycled Polythene

Using pellets from our closed loop recycling machine and refined using our strict quality control system, we have produced a consistent and high quality polythene film that can be used for performance critical products.

Responding to customer feedback for products that were as robust as they were sustainable, we have produced the following three products using 100 percent recycled polythene film.

### 100% Recycled grey mailing bags

Our grey mailing bags are the perfect solution for customers looking for an economic solution to their sustainable packaging requirements.

Not only do they utilise waste polythene and save it being sent to landfill, they're also cost-effective and robust to protect your products from any potential damage in transit.

Our grey mailing bags are available to buy in boxes containing 100 bags, up to pallets of 50,000 and in 10 different sizes.

### 100% Recycled polythene sacks

Made using pellets from the closed loop recycling process and available with a choice of dispensing options, our 100 percent recycled polythene sacks are ideal for most applications. If you have a specific specification we'll manufacture a bespoke sack just for you.

We produce recycled sacks that are either 100 percent transparent, ensuring excellent security and or different coloured sacks, useful for distinguishing refuse types.

### 100% Recycled polythene branded mailing bags

Thanks to the tried and tested consistency of our recycled polythene film, we're also able to offer recycled mailing bags with a bespoke printed design.

A mailing bag can be the first tangible impression of a brand that a customer gets, so it's important to ensure you make a great, lasting first impression. For example, if you're a fashion brand, opting for a mailing bag that reflects current trends can be a really effective way to engage with your fashion-savvy audience.

If you're choosing to invest in 100 percent recycled branded mailing bags, why not print the material type onto your bag and share your commitment to saving waste from landfill with your customers?
